PROFESSIONAL SUMMARY

Motivated and detail-oriented Computer Science Engineering student seeking an IT Support position. Strong foundation in computer hardware, networking, operating systems, troubleshooting, and technical support. Hands-on experience with Windows, Linux, networking concepts, and cybersecurity tools through academic projects and internship experience. Quick learner with excellent problem-solving and communication skills.

EDUCATION

B.E. Computer Science | Rajalakshmi Engineering College | 2022 – 2026

- Relevant coursework: Cybersecurity, Networking, Data Structures, Operating Systems
- CGPA : 6.42

INTERNSHIP

Cybersecurity Intern (remote) | Corizo | April 2026 – Jun 2026

Conducting security assessments and vulnerability analysis as part of structured internship program

- Work on penetration testing methodologies and security documentation practices
- Applying knowledge of web application security to identify and mitigate potential threats

PROJECTS

Bug Bounty Hunting on Open Bug Bounty Platform | Major Project | In Progress

- Identified and reported security vulnerabilities including XSS, SQL Injection, and CSRF on websites listed on OpenBugBounty platform
- Followed a structured methodology: Reconnaissance → Scanning → Manual Testing → Fuzzing → Exploitation → Reporting
- Used tools such as port scanners, web application scanners, and vulnerability scanners for systematic security assessment
- Documented findings with detailed reproduction steps, impact analysis, and remediation recommendations

Penetration Testing on ColdBox Application | Minor Project | In Progress

- Performed comprehensive penetration testing on a ColdBox (CFML framework) web application using automated and manual techniques
- Identified critical vulnerabilities: SQL Injection, Cross-Site Scripting (XSS), and Session Fixation
- Configured Web Application Firewall (WAF) for malicious traffic detection; conducted source code analysis
- Delivered actionable remediation recommendations including parameterized queries and output encoding

AI Video Detection System – Deepfake Classifier | Final Year Project

- Built a CNN-LSTM hybrid deep learning model to classify real vs. fake (deepfake) videos
- Designed the pipeline for video frame extraction, feature encoding, and temporal sequence modeling
- Achieved accurate binary classification of synthetic media, contributing to AI media integrity research

TECHNICAL SKILLS

Security & Testing: Penetration Testing, Vulnerability Assessment, Bug Bounty, Web App Security, WAF Configuration, OWASP Top 10

Networking: TCP/IP, IP Addressing, HTTP/HTTPS, Network Protocols, Cryptography, Firewalls

Programming & Tools: Python, Nmap, Burp Suite, Kali Linux

CERTIFICATIONS

- Learning Cryptography and Network Security – LinkedIn Learning (Lisa Bock) | Completed Apr 2025
- Networking Foundations: Networking Basics – LinkedIn Learning (Kevin Wallace) | Completed Aug 2024
- IT Security Foundations: Core Concepts – LinkedIn Learning (Lisa Bock) | Completed Sep 2024
- Networking Foundations: IP Addressing – LinkedIn Learning (Anthony Sequeira) | Completed Oct 2024
- HTTP Essential Training – LinkedIn Learning (Morten Rand-Hendriksen) | Completed Nov 2024
- Cybersecurity and Privacy – NPTEL | Completed Nov 2025
